

HOUSING VISUALIZATIONS

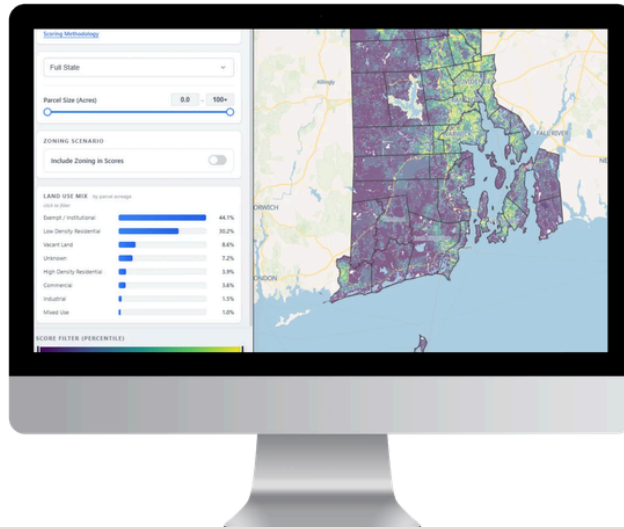

Housing Visualizations is an interactive online tool that helps developers, municipalities, and other interested stakeholders evaluate the housing development potential of parcels across Rhode Island.

EXPLORE, EVALUATE, ENVISION

Select any parcel of land in your municipality to see its housing suitability score, which will show the site's potential for housing development.

Use this free, interactive tool to discover the housing potential of parcels statewide to contribute to Rhode Island's housing success.

TOOL BENEFITS

Supports smarter, data-informed planning decisions

Assists communities in achieving their housing goals.

Helps envision housing that can complement existing neighborhoods

Factors that contribute to a parcel's suitability score include:

Proximity to public transportation

Proximity to schools

Proximity to grocery stores

Existing zoning

Access to infrastructure

Environmental constraints

VISUALIZING HOUSING POSSIBILITIES

This tool allows you to visualize a variety of housing types and see how different forms of housing can be thoughtfully integrated into lots and neighborhoods across Rhode Island, helping communities envision context-sensitive housing options that complement existing neighborhood character.

To the left is an example of a **courtyard apartment building** that could provide approximately 30 units, located in a **Suburban/Urban mixed context**.

Note the commercial buildings facing a larger street on the right side of the visualization, transitioning to a mix of single family and duplex homes along the left side of the visualization.
